

ABSTRACT OF THE DISCLOSURE

The invention relates to a motor vehicle having a system for reproduction of sound, said system for reproduction of sound including as least one bass reflection box equipped with a bass reflection tube and/or a bass reflection opening and with at least one built-in speaker. For that purpose, the bass reflection box is arranged in a side compartment of the interior of the vehicle, and a wall of the bass reflection box, oriented towards the interior of the vehicle, is at least partially coverable with a sound-transmissive lid, the service tools and emergency aids being arranged between depressions in said wall and the lid.

With the present invention, a motor vehicle having a sound reproduction apparatus is created in which a large-volume bass reflection box is optimally accommodated in the trunk compartment. Here the bass reflection box is additionally utilized to accommodate the service tool kit.
